

NetSIP Professional VoIP Services for Australian Businesses

NetSIP is a leading provider of VoIP services for the Australian business market.

NetSIP provides cost effective, business grade VoIP services that simplify and centralise your communications infrastructure, saving you money on setup, configuration and call costs.

- ❖ Centralise all your communication needs including voice, video and data.
- ❖ Exceptional voice quality and reliability over dedicated private circuits.
- ❖ 24x7 Service monitoring and technical support by qualified network engineers.
- ❖ Provides significant savings on your call costs.
- ❖ Consolidate all your telecommunications with minimal infrastructure outlay.

The Technology

Session Initiation Protocol (SIP) is the standard protocol for transmitting voice data over the internet (VoIP).

This technology means your business can make local, interstate and overseas telephone calls to both landlines and mobiles over your broadband network.

NetSIP services can be used with your current broadband provider, or we can provide you with a dedicated private circuit to optimise voice call quality and reliability.

Our equipment and servers are located in Australia, ensuring our team of experts can respond quickly to all your service and technical needs.

About NetSIP

NetSIP is a privately held Australian based Voice and Data Communications Company. The founders of the company have worked in the IT/Telecommunications Industry since the mid 1990s and have been involved in many successful, high growth companies.

NetSIP is one of the prominent providers in the emerging voice services industry through its unbeatable technical support and product quality.

Dedicated Private Circuits

NetSIP is one of the first VoIP companies to recommend and supply a dedicated private circuit for optimal voice quality. With a NetSIP dedicated private circuit, we can better control the voice quality from our voice switches to your PBX. We do this by applying Quality of Service (QoS) metrics across our network to ensure that your voice traffic has absolute priority. We only use high quality Cisco routers, which we pre-configure prior to installation.

24x7 Technical Support

NetSIP's guaranteed 24/7 technical support is provided by the qualified network engineers that install and monitor your service. Your call to our support line is answered personally by one of our experts, who can immediately troubleshoot and rectify any problems.

Rates and Plans

We have a number of plans suitable for small businesses through to large corporations. Please call us and we can help you find the plan that best suits your needs.

Use Your Existing PBX

NetSIP can provide a gateway to interface with your existing PBX. This allows you to take advantage of call savings while minimising capital outlay and reducing installation time.

Competitor Checklist

Compare our products with those of our competitors.

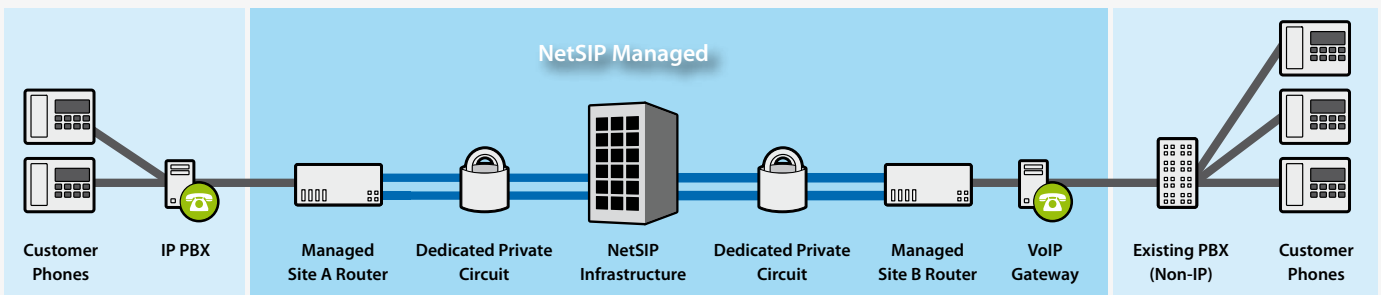

Product Feature	NetSIP	A	B	C
